

# Examining the Wage Trajectories of Community College Students in Virginia

**Shanna Jaggars & Di Xu**  
Community College Research Center  
Teachers College, Columbia University

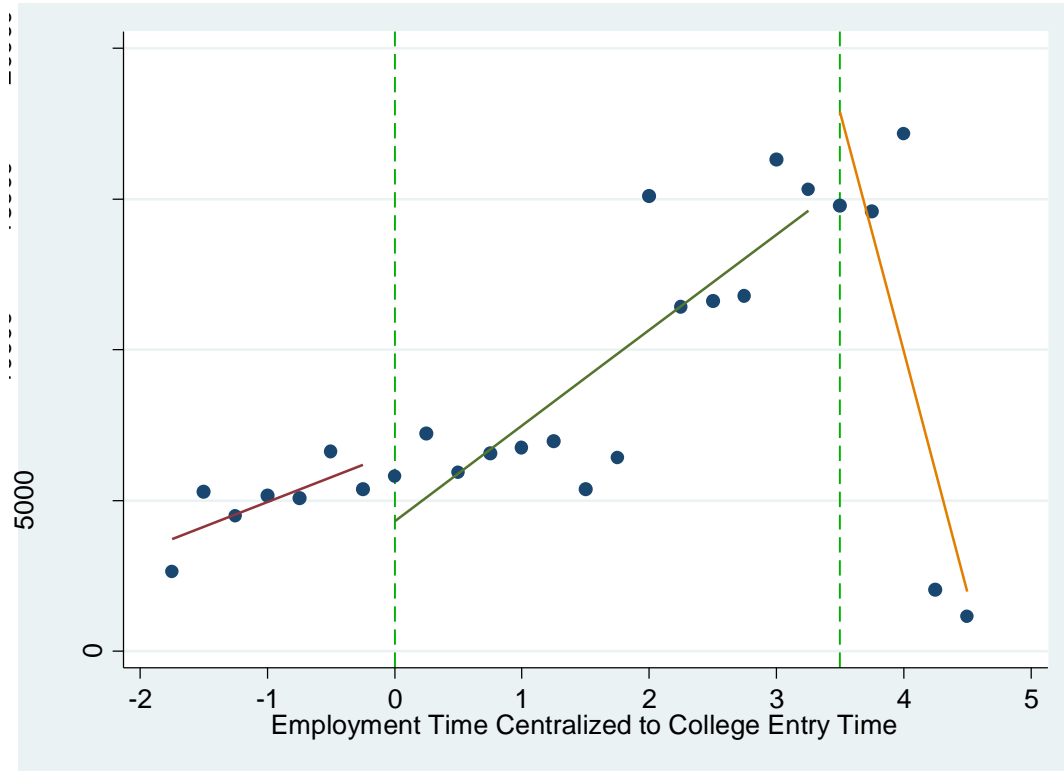

- September 2014 | CAPSEE Conference | Washington, DC

# General Approach

- Rather than compare between types of degrees in terms of returns at a given point in time...
- We compare between types of degrees in terms of how wages change across time

# Conceptual example for one student

- Wages rising slightly prior to college entry
- Wages rose more steeply while enrolled
- A year after college exit, wages suddenly drop
- Estimated “return to degree” depends on which slices of time you compare

# Comparing pre/during enrollment to post-exit trajectory

➤ Same slope, jump in level

➤ Steeper slope, no jump

➤ Steeper *and* jump

# Key Questions

- What are the wage trajectories before, during, and after college enrollment for different degree groups?
- To what extent does post-college trajectory differ from the pre- and during-college trajectory?
  - What are the returns to each type of degree – compared to “some college” degree non-completers?
- Does the general pattern of results differ by demographic group or field of study?

# Data

- 2006-2008 cohorts across the 23 community colleges in Virginia
- Student award data matched with enrollment and graduation data from the National Student Clearinghouse (NSC)
- Student unit-record administrative data matched with UI data (from VA, MD, NJ, OH, PA, WV, & DC)
- Followed from 1st quarter 2005 to 1st quarter 2013
- Quarterly wage data adjusted to 2010 dollars

# Method

- Multilevel growth curve modeling approach (MGCM)
- Individual students' repeated measures of wage are modeled as a function of time
- Combine MGCM with piecewise modeling to allow growth trajectories to vary across pre-enrollment, during-enrollment, and post-credential periods

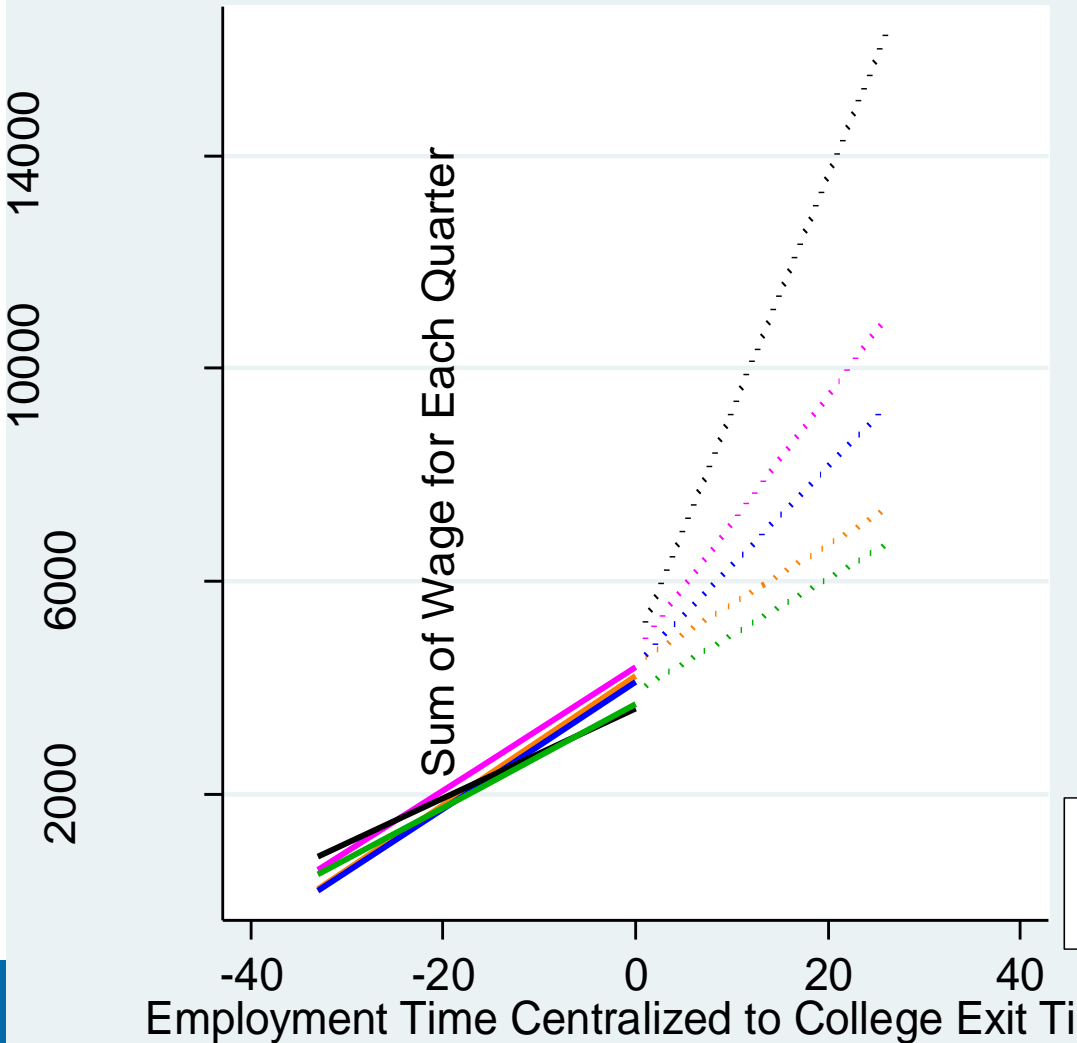

# The Ugly Details: Coefficients for 3-piece MGCM

Intercept	3695.68(56.22)***
Bachelor (BA)	-82.61(165.54)
Associate (AA)	694.54(81.98)***
Longcert (LC)	436.25(158.41)***
Shortcert (SC)	547.52(123.84)***
During College	64.08(20.74)***
During * BA	-260.51(159.33)
During * AA	-426.17(75.29)***
During * LC	-516.91(143.67)***
During * SC	-181.22(100.85)*
After College	245.62(20.81)***
After * BA	921.39(163.56)***
After * AA	57.73(79.11)
After * LC	70.58(150.8)
After * SC	-13.88(104.39)

Time (T)	96.87(3.36)***
T * BA	-12.93(7.76)*
T * AA	17.86(4.14)***
T * LC	22.43(8.56)***
T * SC	24.24(7.58)***
During * T	-18.59(1.18)***
During*T*BA	-2.44(7.28)
During*T*AA	-11.26(3.62)***
During*T*LC	-17.18(7.38)**
During*T*SC	-1.93(6.12)
After * T	9.19(1.89)***
After*T*BA	348.26(11.73)***
After*T* AA	116.34(6.32)***
After*T* LC	57.41(12.6)***
After*T* SC	-19.45(9.97)*

## Before vs. After College

Changes in each trajectory based on 3-piece MGCM

# Overall Returns

- Compared to some-college no-degree students...

Degree Type	Sig. Stronger Jump?	Sig. Stronger Boost in Growth?
Bachelors	Yes (\$ 921)	Yes (\$ 348/qtr)
Associate	No	Yes (\$ 116/qtr)
Long Cert	No	Yes (\$ 57/qtr)
Short Cert	No	No

# Other Interesting Findings: During-College Wages

- Students increase wages across time during college
- But...
  - Immediate post-enrollment drop
  - Slope of increase depressed compared to pre-college
- Drop & depression stronger:
  - Among eventual degree earners (esp. long cert & assoc)
  - Among older (25+) students

# Other Interesting Findings: Older vs. Younger Students

	Older	Younger
Pre-Enrollment	Higher salaries Strong increases	Lower salaries Milder increases
During Enrollment	Immediate drop; Depressed increase	No drop (some even jump); No/mild depression in increase
Post-Exit	<u>Further</u> drop at exit; Strong upward acceleration quickly overcomes this	Jump at exit; Strong upward acceleration
Short certificates	No bump, but accelerated increase	Immediate bump, but no acceleration

# Other Interesting Findings:

## Degree Area (compared to some college)

	Strongest Post-Exit Bumps		Strongest Post-Exit Acceleration	
Bachelor's	Public Admin Business	(\$1873) (\$1425)	Public Admin Math/Science	(\$410/qtr) (\$405/qtr)
Assoc	Mech/Construct Health	(\$1330) (\$ 996)	Hum/Soc Sci Health	(\$126/qtr) (\$206/qtr)
Long Cert	Mech/Construct	(\$ 960)	Mech/Construct Health	(\$114/qtr) (\$52/qtr)
Short Cert	Mech/Construct	(\$ 615)	Hum/Soc Sci Health	(\$278/qtr) (\$47/qtr)

# Implications

- Pre-enrollment wages don't accurately reflect wage potential for younger students
  - Comparing pre-enrollment to post-exit for these students likely overestimates value of degree
- Different timeframes of post-college wage measurement = different conclusions about which degrees are more valuable
  - For accountability, raises question of when to measure wage benefits
- Value of short certificate varies strongly by age & field
